

⚡ ANTIGRAVITY PROMPT CHEAT SHEET

Direct Copy-and-Paste Prompts for 434 Production Skills + Garry Tan's GStack 7-Phase Startup Pipeline

51 Ready-to-Copy Prompts

🚀 THE GSTACK 7-PHASE OPERATING RITUAL (Garry Tan / Y Combinator Pipeline)

#01 • PHASE 1: THINK (YC CEO REVIEW)

"Run /office-hours. Stress-test this new feature using the YC 6-question framework before I write any code: Why build this? Who is the user? What is the distribution?"

#02 • PHASE 2: PLAN (ENGINEERING MANAGER)

"Run /plan-eng-review. Create a technical specification, database schema changes, sequence diagram, and risk assessment for this feature."

#03 • PHASE 3: DESIGN (PRODUCT DESIGNER)

"Run /design-review. Inspect our UI layout, reduce user friction, and verify micro-interactions against Emil Kowalski's design craft standards."

#04 • PHASE 4: BUILD (FULLSTACK DEVELOPER)

"Build the minimal, clean implementation of this planned feature following strict Karpathy coding principles without unnecessary abstractions."

#05 • PHASE 5: TEST (BROWSER QA ENGINEER)

"Run /qa. Launch the headless browser, log into the app, navigate the user flow, click buttons, submit forms, take screenshots, and auto-fix any errors found."

#06 • PHASE 6: SHIP (RELEASE ENGINEER)

"Run /ship. Run pre-ship verification, generate the release changelog, check rollback safety, and commit the code."

#07 • PHASE 7: REFLECT (TECH LEAD RETRO)

"Run /retro. Conduct an engineering retrospective on the work completed, lines of code added, and key lessons learned."

🏠 1. Architecture & Systems Design

#08 • SYSTEM ARCHITECTURE REVIEW

"Act as a senior systems architect. Review my current project structure, analyze module coupling, identify potential scaling bottlenecks, and generate a Mermaid architecture diagram."

#09 • DATABASE SCHEMA DESIGN

"Design a production-grade relational database schema for my app with proper foreign keys, normalization, indexing strategies, and migration steps."

#10 • MICROSERVICES VS. MONOLITH

"Evaluate whether our current application should remain a modular monolith or break down into microservices based on traffic, team size, and latency requirements."

#11 • ZERO-DOWNTIME DATA MIGRATION

"Create a zero-downtime database migration plan for updating our production tables with dual-write patterns and rollback mechanisms."

#12 • FEATURE FLAG ARCHITECTURE

"Design a robust feature flag and canary rollout system for our application with fallback safeguards and zero performance overhead."

🔒 2. Security & Audits

#13 • FULL APPLICATION SECURITY AUDIT

"Act as a senior security engineer. Perform an end-to-end security audit on our frontend, API endpoints, authentication flows, and data storage for OWASP Top 10 vulnerabilities."

#14 • CLOUD INFRASTRUCTURE HARDENING

"Inspect our cloud infrastructure and deployment configurations for open IAM permissions, exposed storage buckets, and security group misconfigurations."

#15 • SECRETS & ENVIRONMENT HYGIENE

"Audit all .env files, build configs, and repository files to ensure no sensitive API keys, database credentials, or private secrets are leaked or committed."

#16 • ADVERSARIAL RED-TEAM THREAT PATH

"Act as an adversarial red-team hacker. Analyze our application architecture and formulate 5 potential attack paths an attacker could take to compromise data."

#17 • API PEN-TESTING & THREAT HUNTING

"Review all public API routes, rate-limiting rules, payload sanitization, and input validations to detect injection or tampering vulnerabilities."

3. Testing & QA Automation

#18 • END-TO-END BROWSER TESTING

"Generate an end-to-end browser automation test suite that tests our core user journeys: checkout, form validation, responsive views, and error edge cases."

#19 • FIX FLAKY OR FAILING TESTS

"Our automated tests are flaky and intermittently failing. Debug the test race conditions, locator timeouts, and async wait issues, and fix them cleanly."

#20 • STRICT TEST-DRIVEN DEVELOPMENT (TDD)

"Guide me through building this new feature using strict TDD. Write the unit tests first covering all edge cases, then write the minimal code to pass them."

#21 • REST API CONTRACT TESTING

"Generate a comprehensive API integration test suite for all endpoints, testing positive flows, 400 validation errors, 401 unauthenticated, and 403 forbidden states."

#22 • CHAOS & FAULT-TOLERANCE TESTING

"Design a chaos engineering test plan to verify how our system behaves when the network drops, database queries timeout, or downstream APIs return 500."

4. Design Engineering & Animation Craft (Emil Kowalski Standards)

#23 • EMIL KOWALSKI DESIGN CRAFT AUDIT

"Review my UI components using Emil Kowalski's design engineering philosophy. Flag invisible details, typography rhythm, spacing balance, and active states using a Before/After table."

#24 • RUTHLESS ANIMATION MOTION REVIEW

"Review the animations in this component against the 10 non-negotiable motion standards. Flag layout thrashing, incorrect easing, sub-optimal duration, and missing reduced-motion support."

#25 • BUILD BUTTERY-SMOOTH WEB ANIMATION

"Build a buttery-smooth animation for this component with custom cubic-bezier spring physics, sub-300ms duration, and GPU-accelerated transform/opacity only."

#26 • FIND MOTION & DELIGHT OPPORTUNITIES

"Inspect my current user interface and identify high-leverage opportunities for micro-animations that make the product feel tactile, responsive, and delightful."

#27 • DIVERGENT UI PROTOTYPING

"Create 3 distinct visual and motion prototypes for this component so I can compare different aesthetic directions and choose the best craft."

#28 • APPLE HIG PHYSICAL INTERFACE

"Refactor this mobile/web interface to follow Apple Human Interface Guidelines with fluid gestures, physical spring dampening, and tactile feedback."

5. Frontend, Fullstack & Clean Code

#29 • HIGH-END UI/UX REFACTORING

"Act as a senior frontend architect. Review my UI components, improve visual aesthetics with modern design tokens, typography, and micro-interactions without breaking layout."

#30 • ZERO-HALLUCINATION MINIMALIST CODE

"Refactor this code following Karpathy's coding principles: keep it minimal, do not invent external functions, keep changes surgical, and avoid unnecessary abstractions."

#31 • ADVERSARIAL CODE REVIEW

"Conduct an adversarial code review of my recent changes. Don't be agreeable—hunt for edge case bugs, memory leaks, state desynchronization, and silent failures."

#32 • ACCESSIBILITY (WCAG 2.2 AA) AUDIT

"Audit our web pages for WCAG 2.2 Level AA accessibility compliance. Check color contrast ratios, screen reader labels, keyboard navigation, and ARIA roles."

#33 • CENTRALIZED DESIGN SYSTEM TOKENS

"Build a centralized design system token structure (colors, typography, spacing, shadows, radii) in vanilla CSS variables that scales across light and dark modes."

6. DevOps, CI/CD & Cloud Infrastructure

#34 • AUTOMATED CI/CD PIPELINE

"Detect our project stack and generate a production-ready GitHub Actions / Cloudflare CI/CD pipeline with automated linting, test suites, and staging/prod deploy stages."

#35 • MULTI-STAGE SECURE DOCKERFILE

"Create an optimized, secure multi-stage Dockerfile for this project that minimizes image size, runs as a non-root user, and caches dependency layers."

#36 • PRODUCTION KUBERNETES MANIFESTS

"Write production-ready Kubernetes manifests (Deployment, Service, Ingress, HPA, ConfigMap) with liveness/readiness probes and resource limits."

#37 • GOOGLE CLOUD SERVERLESS ARCHITECTURE

"Design a scalable Google Cloud architecture for our app using Cloud Run, Cloudflare CDN, Cloud SQL, and automated monitoring."

#38 • AWS SERVERLESS INFRASTRUCTURE

"Design an AWS serverless architecture using Lambda, API Gateway, DynamoDB, and S3 with CloudFormation / Terraform templates."

7. Compliance, Privacy & Regulatory

#39 • GDPR & PRIVACY AUDIT

"Act as a data protection compliance officer. Audit our application for GDPR compliance, Article 30 records, consent mechanisms, and data subject access request (DSAR) readiness."

#40 • ISO 27001 ISMS READINESS

"Prepare an ISO 27001 ISMS internal audit checklist for our application, covering Annex A controls, access logs, encryption at rest/transit, and incident handling."

#41 • SOC 2 TYPE II GAP ANALYSIS

"Review our systems against SOC 2 Trust Services Criteria (Security, Availability, Confidentiality). Identify compliance gaps and required audit logs."

#42 • EU AI ACT CLASSIFICATION

"Classify our AI features under the EU AI Act risk tiers (Prohibited, High-Risk, Transparency/Minimal Risk) and draft the required compliance documentation."

#43 • FDA QSR / 21 CFR 820 AUDIT PREP

"Prepare an audit preparation plan under 21 CFR 820 / ISO 13485 for design controls, risk management, and CAPA procedures."

8. Executive, C-Suite & Product Strategy

#44 • CTO TECH DEBT & SCALING REVIEW

"Act as my Chief Technology Officer. Stress-test our technology stack, build vs. buy decisions, runway burn, and technical debt prior to our investor board meeting."

#45 • CFO SAAS METRICS & RUNWAY MODELING

"Act as our CFO. Analyze our revenue model, gross margin, customer acquisition cost (CAC), lifetime value (LTV), and calculate runway scenarios."

#46 • PRODUCT DISCOVERY & PRD SPEC

"Act as a Senior Product Manager. Help me refine this product idea, map user personas, prioritize features using RICE, and write a comprehensive PRD."

#47 • PRICING & MONETIZATION STRATEGY

"Evaluate our current pricing tiers. Recommend value metrics, packaging, freemium vs. trial models, and upsell triggers to maximize Net Revenue Retention (NRR)."

#48 • AGILE BACKLOG & USER STORIES

"Break down this feature epic into small, testable agile user stories with Gherkin (Given/When/Then) acceptance criteria and story point estimates."

9. SEO, Growth & Copywriting

#49 • TECHNICAL SEO AUDIT

"Perform a technical SEO audit on our web application. Check meta tags, structured JSON-LD schemas, OpenGraph previews, crawlability, and Core Web Vitals."

#50 • HIGH-CONVERTING LANDING PAGE COPY

"Write high-converting, punchy copy for our homepage hero, value propositions, social proof testimonials, and primary CTA using behavioral psychology principles."

#51 • PROGRAMMATIC SEO ARCHITECTURE

"Design a programmatic SEO architecture to generate location and feature pages dynamically with unique value, canonical links, and zero duplicate content penalties."
